Abstract

Diagnozo will hopefully be a tool to allow finding a medical diagnosis based upon a tag based filtering system.

1 The diagnosis database: Diagnozo.xml

The Diagnozo.xml¹ file contains the informations related to a diagnosis.

I suggest the following xml elements and attributes. Have a look at this example:

Listing 1: "First version of Diagnozo.xml"

```
<diagnozo>
  <diagnosis name="Azygos_lobe">
    <url>http://en.wikipedia.org/wiki/
      Azygos_lobe</url>
    <xray>small line in the upper lobe of the
      right lung<xray/>
  </diagnosis>
  <diagnosis name="Insufficient_inspiration">
    <xray>unsharp dens hilar vessels<xray/>
    <xray>pulmonary increased streaking<xray>
    <differentialdiagnosis>Heart failure<
      differentialdiagnosis>
  </diagnosis>
</diagnozo>
```

¹Diagnozo is esperanto for "diagnosis".

1.1 Attributes

name name of the diagnosis

1.2 Elements

All elements can be used multiple times per diagnosis.

url urls

region region of the body where the disease can occur

xray how does the diagnosis look like in native x-ray images

ct how does the diagnosis look like in computed tomography scans

mri how does the diagnosis look like in computed tomography scans
